## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 1/30/2007 have been fully considered but they are not persuasive.

Applicant again states that there is support for "optically programming a phase change memory after electrically programming said memory" in the specification as originally filed. The examiner understands that claim limitations can be expressed in words other than those originally filed, but there is still no teaching or suggestion from the specification that such a limitation as claimed could reasonably be discerned.

Applicant identifies page 8, lines 7-11 as teaching optically programming after electrically programming, but, again, there is no such teaching or suggestion for this. The fact that the optical programming is described second in the specification is not a teaching that one method happens after the other. Furthermore, Applicant's conclusory statements that "transitions must occur" and "this would involve, in one embodiment, electrical programming followed by light programming" are assumptions that are unsupported by the specification.

Thus, the rejection of claims 1-10 stands. The rejection from the previous office action is reproduced below.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. **Claims 1-10** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

4. Specifically, with regard to claim 1 (and depending claims 2-10), there is no teaching or suggestion in the originally-filed specification that optical programming occurs *after* electrical programming. Applicant argues in the remarks that the new claims are "consistent with the disclosure of the present application which suggests interchangeable optical and electrical programming." Not only is there no word "after" in the entire specification, but it is not clear where in the specification "interchangeable optical and electrical programming" is disclosed. In addition, if there was a teaching of "interchangeable optical and electrical programming", it is unclear how this would suggest that optical programming occurs *after* electrical programming.

#### **Conclusion**

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 6,969,867 discloses optical and electrical accessing of a memory and may be used in a future art rejection. (see col. 11, lines 5-38)

US Patent 7,161,167 is a related application of Applicant.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
